

BHAGYA SANKAR MADDELA

Senior Angular Developer — Full-Stack (.NET, SQL Server)

Hyderabad, India • m.bhagyasankar@gmail.com • +91 9603789256 • [linkedin.com/in/bhagyasankarmaddela](https://www.linkedin.com/in/bhagyasankarmaddela) • mbsfolio.netlify.app

PROFESSIONAL SUMMARY

Senior Angular Developer with 5+ years of experience building enterprise web applications with Angular, TypeScript, RxJS, .NET REST APIs, and SQL Server. Currently the sole frontend engineer on a production healthcare EMR platform, owning Angular architecture, .NET API integration, SQL stored procedures, and Power BI / DAX reporting end to end. Also builds full-stack independently — designed and shipped CareerPilot (Angular 19 + ASP.NET Core + PostgreSQL), covering REST API design, data modelling, authentication, and deployment.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, JavaScript, HTML5, CSS3, SCSS

Angular: RxJS, Observables, Reactive Forms, Dynamic Forms, Signals, Computed Signals, Standalone Components, Lazy Loading, Route Guards, Dependency Injection, HTTP Interceptors

UI Frameworks: Angular Material, PrimeNG, Bootstrap

Backend & APIs: .NET / ASP.NET Core, C#, Entity Framework Core, REST API design, JWT authentication, Express.js

Databases: SQL Server, T-SQL, Stored Procedures, PostgreSQL

Reporting & Analytics: Power BI, DAX, Power BI Service

DevOps & Tools: Git, GitHub, GitHub Actions, CI/CD, Docker, Postman, Jira, Visual Studio, VS Code, SSMS

Methodologies: Agile, Scrum

Also: React, Next.js

PROFESSIONAL EXPERIENCE

CommerzTech (India) Pvt. Ltd.

Sep 2024 – Present

Senior Software Programmer

- Sole frontend engineer responsible for Angular development, enhancements, and production support across enterprise healthcare applications for a US-based client (Caduceus USA).
- Developed and maintained Electronic Medical Record (EMR) modules used daily by healthcare providers.
- Developed and integrated .NET REST APIs consumed by the Angular front end, contributing to API contracts and payload design.
- Wrote SQL queries and stored procedures in SQL Server supporting application and reporting requirements.
- Designed and built Power BI dashboards, KPIs, and DAX measures; published to Power BI Service with role-based access and embedded the reports inside the Angular applications.
- Diagnosed and resolved production-critical defects and performance bottlenecks, with direct client-facing accountability.

Key projects: EMR5 (Caduceus USA) — enterprise Electronic Medical Record platform supporting Workers' Compensation, Corporate Health, and Patient Management workflows · Acme Health — CommerzTech's HIPAA-compliant AI-driven medical-reporting product; built the Angular frontend for secure visualization of sensitive clinical data.

Sorano Technologies Pvt. Ltd.

May 2021 – Jul 2024

Software Programmer

- Developed and maintained enterprise Angular applications for healthcare administration systems serving US-based clients.
- Designed and implemented a metadata-driven dynamic form builder using Angular Reactive Forms — controls, validations, and workflows rendered at runtime from database configuration; reused across five client engagements.
- Built reusable UI component libraries with Angular Material and PrimeNG.
- Integrated Angular front ends with REST APIs and backend services.
- Modernized legacy .NET and VB applications to Angular, including a financial-services stock/portfolio system (PRISM) and an administration UI (Custom Point).
- Contributed to React and Next.js internal applications, including Sorano's skill-assessment platform (Online Exam Portal).
- Collaborated with distributed, cross-functional teams following Agile and Scrum.

Key engagements: Gold Coast Health Plan (healthcare administration workflows) · CA Life Line (healthcare administration & workflow modules) · Custom Point (.NET UI → Angular migration) · PRISM (VB stock/portfolio system → Angular) · Online Exam Portal (React / Next.js).

FEATURED PROJECTS

CareerPilot — Job Application Tracking Platform (personal, full-stack, solo-built)

Angular 19, TypeScript, Signals, RxJS, Standalone Components, ASP.NET Core (.NET 10), C#, EF Core, PostgreSQL, JWT, Docker, Vercel, Render, Neon

- Designed and built the entire stack solo — Angular 19 frontend (Standalone Components, Signals, Computed Signals, functional guards, HTTP interceptors) on an ASP.NET Core (.NET 10) REST API backed by PostgreSQL via Entity Framework Core.
- Built CRUD with search, filtering, sorting, pagination, and per-user data isolation across companies, recruiters, applications, and interview stages.
- Implemented JWT authentication and a hardened single-use, expiring token-based password-reset flow (no user enumeration).
- Added 54 automated frontend and backend tests, containerized the API with Docker, and deployed the full stack across Vercel, Render, and Neon PostgreSQL.

Nimbus AI — AI-Powered Weather Intelligence Platform (personal)

Angular 19, Signals, Standalone Components, RxJS, Express.js, Groq API, GitHub Actions

- Built a modern Angular 19 application with Signals-based state management and an Express.js middleware layer for secure AI API communication (Groq / Llama 3.3).
- Configured GitHub Actions workflows for automated build validation; deployed frontend and backend via Vercel and Render.
